

INTRODUCING · A NEW SERVICE LINE

Make your application ready for the agentic-AI era.

iLeaf.ai Adaptive transforms the applications we already built together into intelligent, agentic, AI-native experiences — no rebuild, no disruption.

An initiative by iLeaf Solutions · 15 years of trust · 200+ products shipped

WHY NOW

Your app still works. **The world moved on.**

Users now expect software that understands them, acts for them, and anticipates what's next.

Reactive → Autonomous

Software that waited for clicks now plans and acts on its own.

Screens → Conversations

Forms and menus give way to natural language and voice.

Reports → Foresight

Static dashboards become live, predictive answers.

The question is no longer whether to adopt AI — it's how fast your existing app can flow with it.

THE TEAM BEHIND IT

We built it. Now we'll **evolve** it.

15

years engineering & maintaining client applications

200+

products shipped across regulated, domain-heavy industries

3

global delivery hubs — India (HQ), USA, UK

Two years ago we launched a dedicated wing built only for AI — the same people who know your codebase, now specialised for the agentic era.

Agentic AI

RAG & Graph RAG

MCP integrations

Predictive intelligence

AI DevOps

Contract-lifecycle AI

The partner that already knows your application — now equipped to make it intelligent.

THE NEW SERVICE LINE

Introducing **iLeaf.ai** Adaptive

We transform your existing, long-running application into an agentic, AI-native product — by layering intelligence over what you already own.

Legacy → Agentic

Turn the APIs and logic you already run into agentic skills that reason and act.

MCP-native

Connect your app to the AI ecosystem through MCP-style open protocols.

Insight.AI

Let your team speak to your own data and get answers grounded only in it.

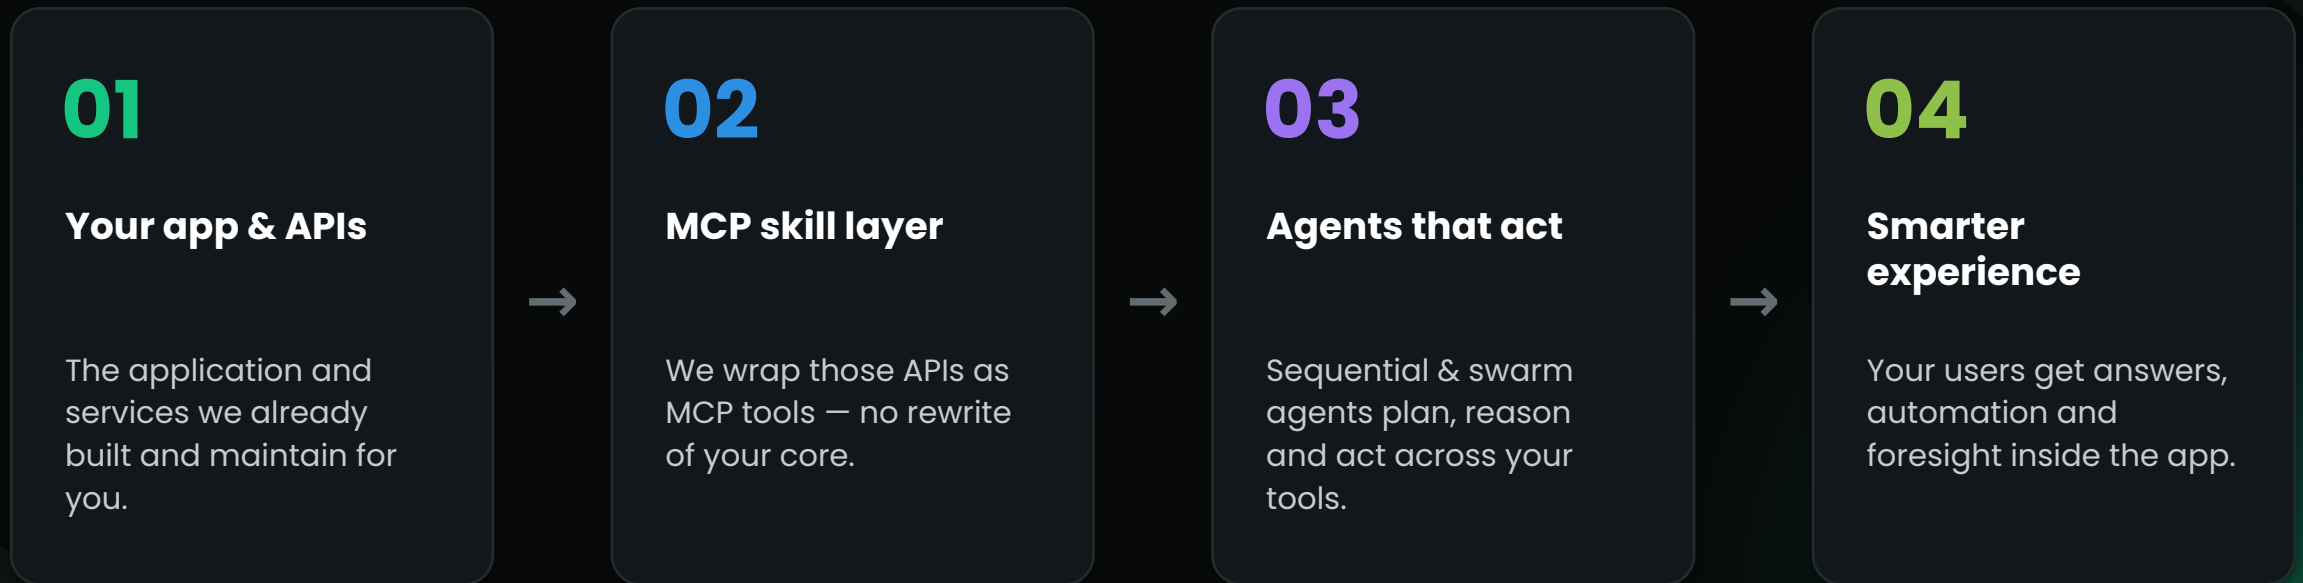

Modular service

It's a service, not a black box — add only the skills your roadmap needs.

Not a rebuild. An upgrade your users feel from day one.

From legacy APIs to **agentic skills**

A clean intelligence layer over your current system — your code keeps running, untouched.

Supports MCP and open agent protocols — future-proof, and built to plug into the wider AI ecosystem.

One stack. **Whichever intelligence fits.**

Agentic AI

Sequential & swarm agents that plan, reason and act across your systems.

Predictive Intelligence

Forecast what happens next — demand, churn, risk — from your live data.

Automation AI

Autonomous workflows that replace slow, manual, repetitive steps.

NLP & Conversational AI

Let users chat with your product in plain, natural language.

Machine Learning

Models tuned to your domain, your data and your edge cases.

Voice AI

Intelligent voice agents and call handling on real phone numbers.

We compose the right mix per use case — you don't buy everything, you buy what fits.

FLAGSHIP CAPABILITY

Insight.AI — speak to your own data.

A private intelligence layer over your system. Ask questions in plain language and get answers grounded strictly in your data — with prediction built in.

Private & secured

Your data stays yours — never used to train public models.

Predictive by design

Not just “what happened”, but “what happens next”.

Learns your system

Improves from what is actually happening in your app.

ASK YOUR SYSTEM

What will sales look like next week?

Likely ~12% above last week — driven by your pipeline and the usual month-end lift.

Which customers are about to churn?

37 accounts show early churn signals — top driver: falling weekly active use.

Your data, reasoning for you — and for no one else.

A phased path — **zero disruption** to live users.

01

Assess

We map your app, data and APIs — most of which we built.

02

Connect

Wrap your services behind an MCP-style skill layer.

03

Build

Add agentic skills and stand up Insight.AI on your data.

04

Predict

Layer predictive intelligence over live operations.

05

Scale

Add voice, automation and more skills, on demand.

Each phase ships value on its own — and your current application keeps running throughout.

A SERVICE, NOT A PRODUCT

Add skills **as you need them.**

Every capability is a modular skill. Start with one, add more over time — pay only for what fits your roadmap.

- Voice AI calling
- Smart IVR & numbers
- NLP chat assistant
- Predictive forecasting
- Workflow automation
- Contract intelligence (CLM)
- Graph RAG search
- Fraud & anomaly alerts
- Recommendation engine
- Multi-agent orchestration
- Document understanding
- Sentiment & insight

Don't see your need here? Skills are custom-built — if it helps your users, we can add it.

INDUSTRY PLAYS · THE LANDSCAPE

Built for **your industry.**

Wherever your application lives, iLeaf.ai Adaptive fits the domain — and we've already shipped in most of them.

Healthcare

Finance & Lending

Mobility / On-demand

E-commerce & Retail

Real Estate

SaaS Platforms

Logistics & Supply

EdTech

Insurance

Manufacturing

Ten shown — the model extends to any data-driven application we've built.

What an agent looks like **in your domain.**

Healthcare

Pre-screens patient intake and answers staff questions over EHR data.

Finance & Lending

Checks loan eligibility, explains decisions, and flags fraud in real time.

Mobility / On-demand

Predicts demand, rebalances supply, and resolves trip issues on its own.

E-commerce & Retail

Guides shoppers, predicts restocks, and recovers carts via chat & voice.

Real Estate

Matches buyers to listings, books viewings, and forecasts pricing.

Logistics & Supply

Tracks shipments, predicts delays, and reroutes deliveries proactively.

Concrete starting points — each one tailored to your data, rules and workflows.

What your users **actually** feel.

Just ask, in their words

Plain-language answers, no menus.

A patient checks results in seconds.

Help before they ask

It anticipates, then acts first.

A lender surfaces a better rate.

Always-on voice & chat

24/7 support on real numbers.

A rider resolves an issue at 2am.

Personal to each user

Tailored to their own history.

A shopper sees what they'll buy.

Fewer steps, less friction

Whole tasks done in one turn.

A tenant books a viewing in a message.

Answers they can trust

Grounded, explained, transparent.

A customer sees why a decision was made.

The ultimate experience: software that understands, acts, and anticipates — in your users' words.

The safest hands for **your application.**

We already know your app

15 years and 200+ products — we wrote and maintain the code.

An elite AI division

iLeaf.ai is a dedicated wing, not a side project bolted on.

MCP-native & future-proof

Built on open protocols so you're ready for what's next.

Your data stays yours

Private, secured, and never used to train public models.

Modular & customizable

A service you can shape — add or remove skills any time.

Enterprise delivery

Secure SDLC, NDA-ready, with global support across time zones.

The partner who built it, the division that masters AI, and a service shaped around you.

Ready your app for the AI era.

Brace for the change — and let it **flow**.

Give your customers the ultimate experience: software that understands them, acts for them, and anticipates what's next.

Let's make your app agentic.
